Introduction

Before the idea of creating a fund of the future appeared, I wondered: what is investment today? Nowadays investment is not just a part of life, it is a part of modern society. We invest in our education, in our health, and in our business, knowing that this will help us live the life we wish for ourselves in the future. The more you invest in yourself, the faster and more you are likely to succeed – this is the formula of modern life. Thus, investments – any of them – allow people to plan the future, multiply their opportunities and broaden their horizons. However, any opportunity always carries a certain amount of risk. In the case of investment activities, the risk is the possibility of an adverse event: partial or complete loss of your investments. Avoiding such risks is possible by making investments professionally. That implies being an expert not only in economics, but also in politics, finance, law, taxes, behavioral psychology, and philosophy. It also means having experience in analysis and forecasting, keeping in mind modern tendencies and trends, understanding the science, discoveries and applications of scientific experience... and many other things, closely intertwined in social life.

This means that you need to be immersed in the investment process 24/7, otherwise you risk missing something important. How to achieve that in a modern life, where work takes up most of one's time, when we also want to pay attention to our family, friends, and hobbies? You will need the help of a professional. Professionalism is determined by experience: this is something that cannot be obtained in a short time. Experience requires years of practice, consisting of mistakes, successes, analyses and the lessons you learn from it. However, what if you or your investment advisors lack experience? Or what if they do have experience, but lack the flexibility in judgment or are shortsighted? How to achieve objectivity and minimize risks?

Today, one of the most efficient ways of actualizing high-risk, innovative high-tech projects is to appeal to investment funds. Venture business has gradually transformed into a powerful global industry and established itself as one of the most effective tools for supporting and developing the real economy sector and the blockchain world.

Investment is a complex process with many factors to consider, including:

- type of investment;
- investment project's cost;
- variety of available projects;
- limited financial resources for investment;

- project team;
- idea appeal;
- growth prospects for invested funds.

Each investment fund has a specific purpose:

- asset value increase;
- current income;
- capital maintenance.

After analyzing all the pros and cons of investment funds, our team realized it could use its experience in creating and managing international projects, as well as its knowledge of institutionalized financial investment systems to set a goal for itself – create a fund that combines the best characteristics of classical economics and innovative technologies.

CEO of TheFund.io
Rafis Yusupov

Idea Description for TheFund.io

Page 4

The Idea

TheFund.io is a blockchain fund that allows a wide range of people to earn money on their investments based on a safe and smart capital distribution system.

The fund is divided into two equal parts:

1. Infrastructural, which will provide a lifelong source of passive income to those investors who invested in the project during the ICO stage.
2. Investment, for which all decisions are determined by voting. Any member of the community (who has already passed KYC) can vote "for" or "against" financing for a project. The weight of each investor's vote is proportional to their equity exposure in the fund's total capital and their current token balance. After analyzing hundreds of funds created during the financial system's formation, our team focused on their disadvantages, which previously had been impossible to consider due to insufficient technological development. Combining the world's best investment practices, developments in the field of blockchain, and artificial intelligence, we created TheFund.io - a hi-tech investment fund.

Mission and Aim of TheFund.io

Today, there are many different investment, venture and hedge funds. So, how can TheFund.io distinguish itself and meet all the needs of both its investors and projects? We have found a solution that will satisfy all parties.

The TheFund.io's primary task is to become a bridge between the investment and blockchain worlds and help new projects find the resources to realize their ideas.

The goals for TheFund.io are to

- provide a choice among selected investment products;
- rank projects, using the Axon artificial intelligence;
- professionally conduct legal due diligence for all financial documents;
- help projects successfully develop and launch their ICOs;
- pay dividends on potential project profits in a decentralized blockchain platform;
- provide investors with a semi-passive income from the expected profit of the fund's infrastructure part;
- and broaden the world's horizons with promising, brand-new projects.

According to these tasks and goals, we have decided the TheFund.io mission is to "Maximize investors' profits through investments in promising ideas and transform those ideas into commercially effective business projects."

Market Analysis

Page 6

Market Appeal

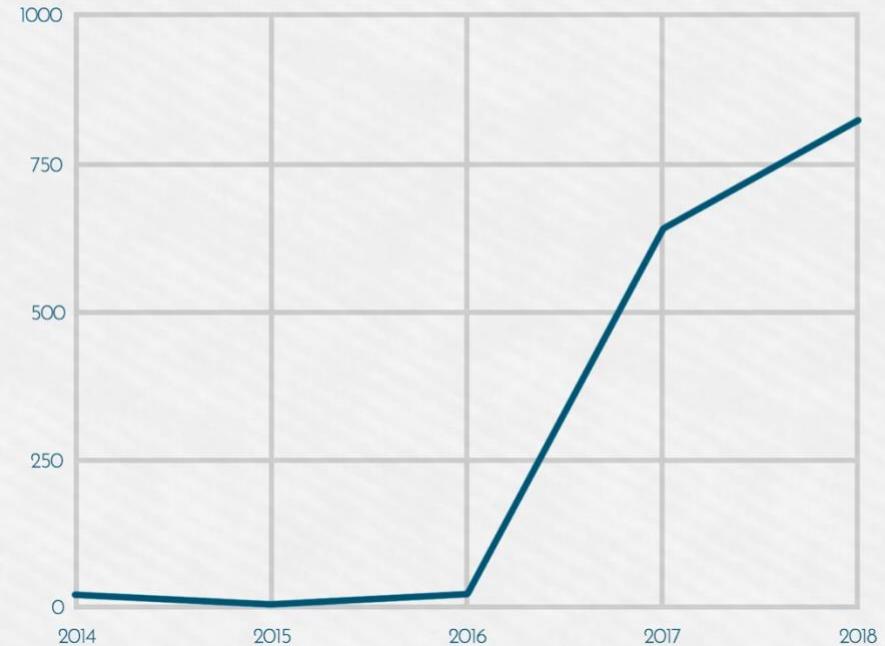

The cryptocurrency market scales annually and its capitalization is constantly growing. More and more blockchain technology investors are coming into the market. Years 2017 and 2018 have become the "golden years" for the cryptocurrency market, as new tokens and coins were issued at an increasing rate. In 2017, cryptocurrency capitalization increased 32 times from 17.9 billion to 596.1 billion dollars.

From Dec 20, 2015 to Jan 24, 2018

The dynamics graph for crypto-market capitalization in 2016-2017
(Source: Coinmarketcap.com)

On January 7, 2018, the total value of digital assets reached a new, all-time high of \$828 billion. During 2017, capitalization of all Altcoins increased 148 times from 24 billion to 355 billion dollars, a fact that demonstrates the great potential in this market.

Graph of maximum total market capitalization in the period 2014-2018
(Source: Coinmarketcap.com)

Every year, an increasing number of countries are joining the cryptocurrency economy, giving the crypto- and blockchain industries more credibility. At present, many countries have decided to keep an eye on those that are actively integrating cryptocurrency into their economies. These countries that allow cryptocurrencies receive benefits in the form of funds for blockchain startups and, as a result, blockchain technology will extend far beyond the limits of cryptocurrency.

Criticism, Problems and Disadvantages of Existing Funds

Traditionally, venture capital is investments that distribute money to startups. Most of these startups will fail but some might shoot to the top, and these "winners" will more than recover their losses. Such is the business of venture capitalists.

However, not everyone knows that another type of venture fund, called a "corporate venture fund", has existed for more than 40 years and consists of investments made by large companies. Traditional venture investors typically focus on financial returns, while corporate venture investors are oriented towards strategic results. It is too difficult for a large company to keep the track of all innovations. Therefore, it supports startups to gain access to their inventions and buys out completely the most promising startups.

Today's investment funds have many disadvantages:

- Lack of projects audits;
- Investments in unprofitable projects;
- Risk of hacking and funds theft;
- Non-transparent dividend policy;
- Difficulties withdrawing from the fund or refunding money;
- Lack of full legal due diligence project documents, meaning ICO organizers cannot be held accountable for unfulfilled promises;
- Lack analyses on a project's prospects and its profitability for investors;
- Lack control in using resources from the project;
- Lack a "diversification" system for investment products (investing in different assets reduce risks);
- Funds do not participate in the realization of their investment projects;
- Lack decentralized, priority voting;

- Lack of project analytical tools that function without human intervention;
- Funds restrict investment sectors;
- Lack lifelong dividend payments.

Creating an investment fund is risky business, often subject to much criticism and it involves large investments. Experience, careful analysis and careful selection of invested projects should be the guiding principles in investment fund activity.

Benefits of TheFund.io

- Transparent democratic voting system for projects;
- Semi-passive income for investors that have invested in TheFund.io at the Pre-Sale and ICO stages from the investment activities of the fund's infrastructural part;
- Dividend payments to token holders per smart contract agreements;
- Multi-signature system to protect fund assets;
- Use of Axon, an artificial intelligence that scores projects up for investment;
- Advisors with more than 14 years' experience investing in the real sector of business and innovative startups;
- Support to actualize funded projects;
- Investment portfolio diversification to reduce risks.

Details of the TheFund.io ICO

Page 10

ICO Mechanics

To carry out our mission, we need to conduct an ICO (Initial Coin Offering), which is the initial placement of coins (tokens). During the ICO, we sell digital tokens to ICO participants in exchange for cryptocurrencies or fiat money. These tokens can be used on the TheFund.io platform as internal currency or traded on decentralized exchanges.

We are planning to raise funds to launch and develop our project, and create a full-fledged infrastructure (investment capital formation) by issuing our own tokens and exchanging them for popular crypto-currencies (Bitcoin or Ethereum, for example) or fiat currency (dollars or euros). Also, the raised funds will be used to support the project in the long term.

The ICO is held in three stages:

Pre-Sale. Those who invest in TheFund.io at this stage will have the opportunity to get tokens at a favorable rate with additional rewards. This stage will last for two weeks. The amount of the promotion will be 30% at a token price of 0.25 USD.

The first stage of the ICO lasts 56 days. In the first 28 days, investors will receive an additional 20% of their investment amount in tokens and in the second period of 28 days, they will receive 15% in addition to their investments. The token price in the first ICO phase will be \$ 0.25.

The second stage of the ICO lasts 56 days. In the first 28 days of the second stage, investors will receive an additional 10% of their investment amount in tokens at a token price of \$0.30 and in the following 28 days, investors receive 5% in addition to their investments at a token price of \$0.35.

The third and final stage of the ICO lasts 56 days. At this stage, investors receive tokens without incentives or additional interest, but have the opportunity to claim lifetime dividend payments. The token price will be \$0.50.

	Period (days)	Discount (%)	Token price during stages (USD)
Pre-sale	14	30,00%	\$0,25
I stage ICO	28	20,00%	\$0,25
	28	15,00%	\$0,25
II stage ICO	28	10,00%	\$0,30
	28	5,00%	\$0,35
III stage ICO	56	0,00%	\$0,50
Result	182		

Benefits of Participating in the ICO

By participating in the ICO, you get the opportunity to claim lifelong dividend payments from our fund, proportionate to the size of your investment, and the ability to choose the projects you would like to invest in for future income.

The table below shows the benefits of joining the ICO at the early stages. To illustrate, a calculation of the discount and the number of tokens investors get by investing \$1000 at different stages is presented.

	Discount (%)	Price of token (USD)	The number of tokens from the investment is 1000\$
Pre-sale	30,00%	\$0,25	5200
I stage ICO	20,00%	\$0,25	4800
	15,00%	\$0,25	4600
II stage ICO	10,00%	\$0,30	3666,666667
	5,00%	\$0,35	3000
III stage ICO	0,00%	\$0,50	2000

Obviously, the investment at the earliest stage provides an advantage over the Fund participants who joined us at a later stage.

For clarity, a graph of the investment of \$ 1000 at different stages.

Thus, in the Fund's activities, a system of dividend payout between investors, which will be based on the extent of their participation in raising capital, will be implemented. The Fund's capital is divided into two parts:

1. Investment. Investors participate in this part of the fund by voting. The income from its activity will be fully (100%) distributed among all the holders of The Fund tokens. Payments will be made based on the speed of investment project implementation;

2. Infrastructural. This part ensures the successful operation of the Fund. Revenues from this part will finance all expenditure parts of the Fund. Self-investment will account for 50% and 40% of the net profit will be spent on lifetime payments to investors who participated in the capital formation. Payments will be made based on the investment project implementation speed.

Based on the available data, we assume the following opportunities for payments to holders of our tokens.

Our expectations of payments for the implementation of different targets.

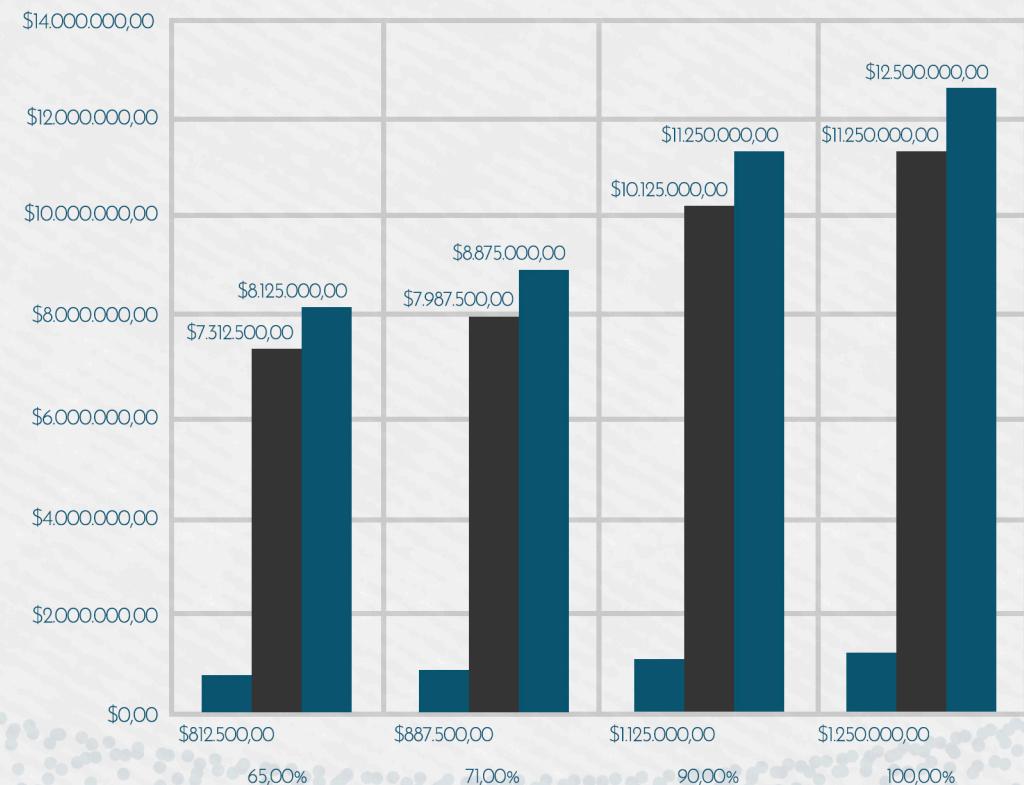

The result of the activity of our Fund in the reporting periods is the possibility of payment of remuneration. Data were obtained on the basis of the financial policies stipulated by the Fund. Even the most modest forecasts show impressive results.

Payments provide for the received income from investment activities, without taking into account the received income from exchange and over-the-counter cryptocurrency trading

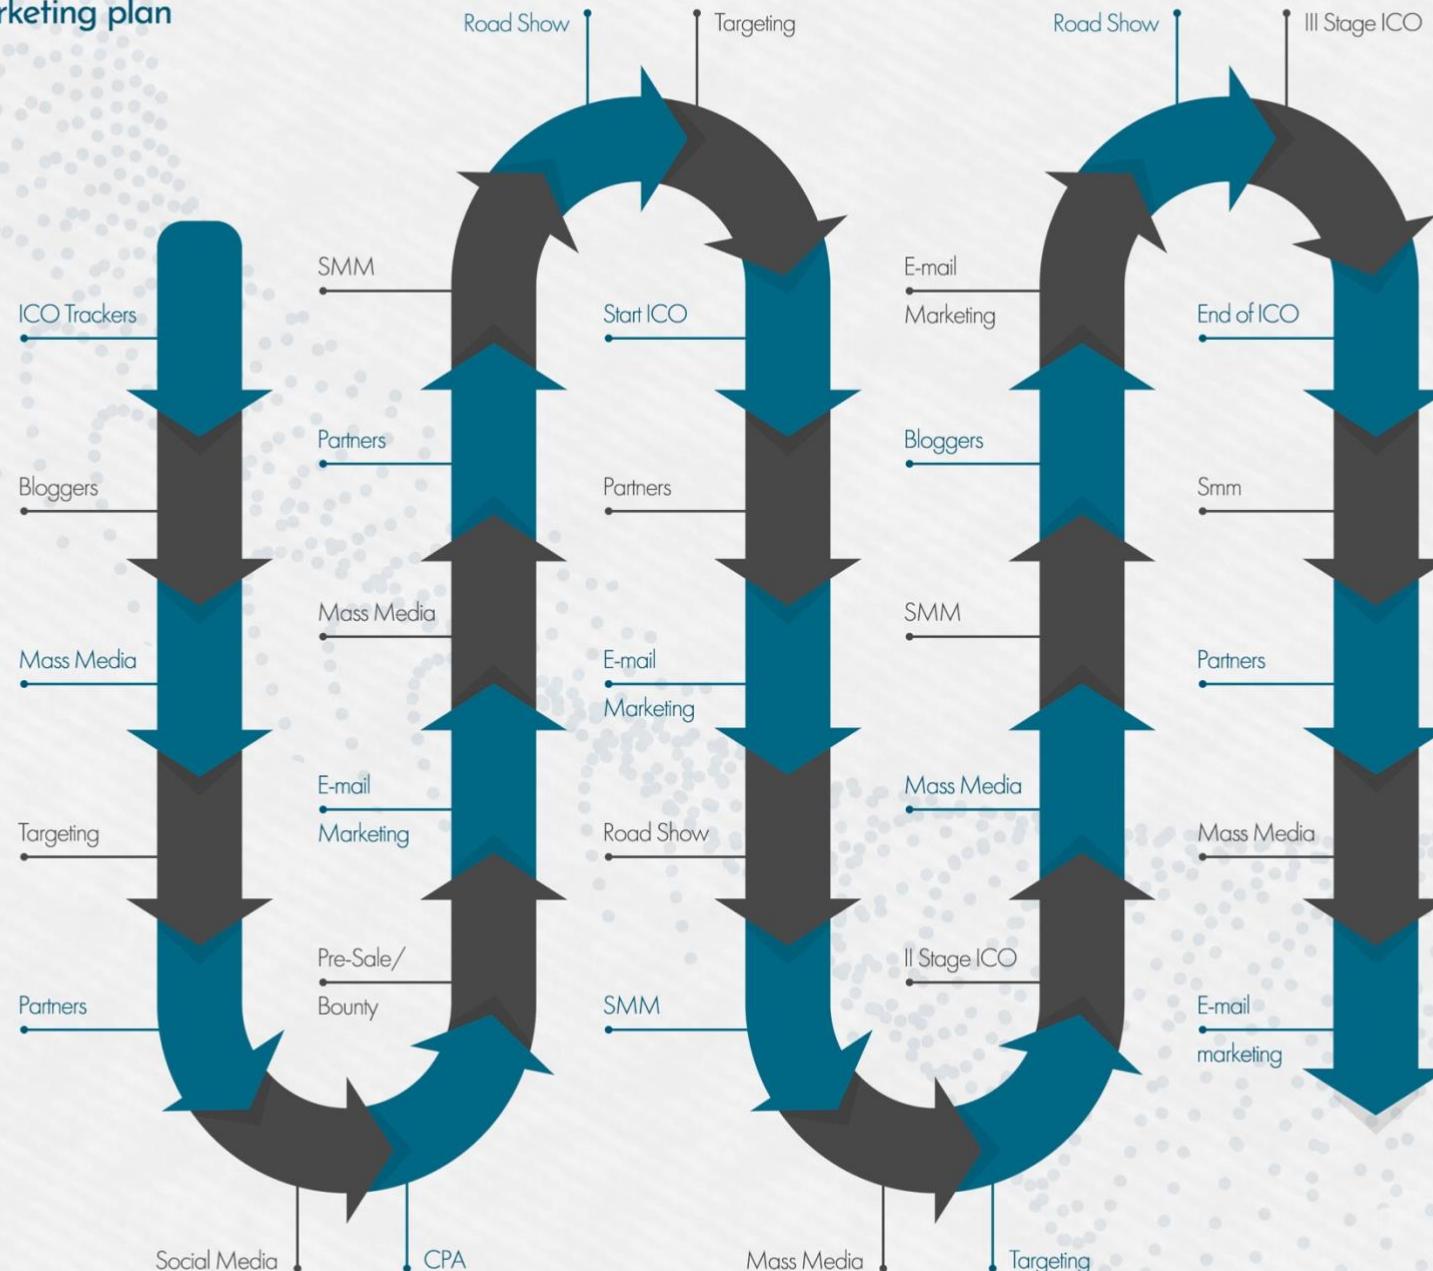

Investing in the fund is supposed to be done via cryptocurrency gateways. Cryptocurrencies that will be accepted for investment:

1. Bitcoin;
2. Ethereum;
3. Tether USDT;
4. Litecoin;
5. Bitcoin cash;
6. TRON;
7. ZCASH.

Payments to token holders

Marketing plan

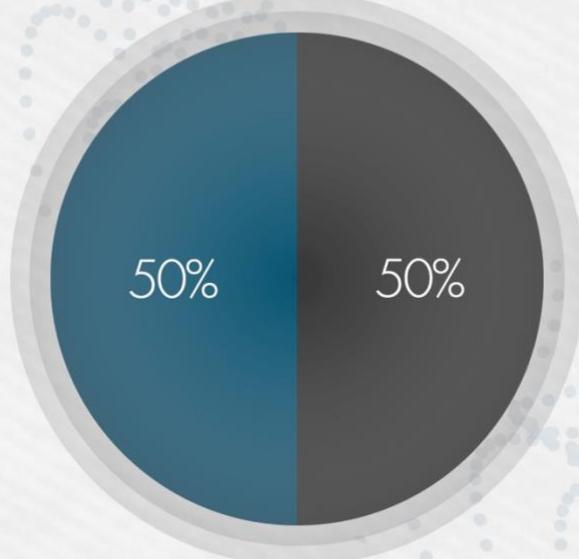

Fund Economy

The fund consists of two parts.

Infrastructure part

Investment part 

1. Infrastructure part

Team maintenance (payroll fund, maintenance fund for infrastructure facilities and production means)	25%
Advertising and PR (a need-based, floating interest; will be reduced after the ICO)	5%
Investment capital	55%
Team bonuses	10%
AXON development	5%

2. Investment part

Investment capital. The data presented in the table is a model and is approximate. It will vary, depending on the market conditions and prospects of the analyzed projects.

This fund's model is based on the idea that investors who take part in the Pre-Sale and ICO will have a lifelong claim to potential income from the infrastructure portion of the fund and the opportunity to receive fund tokens. Fund tokens allow investors to participate in investment project voting.

Token Economy

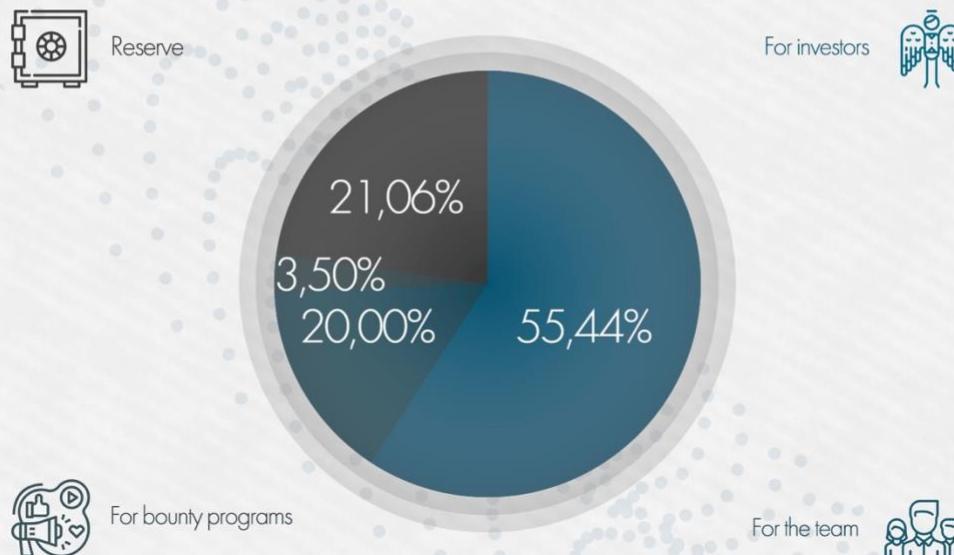

The team will receive 20% of the tokens sold to investors, but no less than 2,432,000. The number of tokens allocated to bounty and airdrop is 3.5% of the number of tokens sold to investors, but not less 425,600. The chart below shows shares distribution.

Token name: TFIO

Token Distribution		
Total token number	100%	180000000,00000000
Tokens for investors	55,44%	99800000,00000000
Tokens share for the team	20,00%	36000000,00000000
Tokens share for bounty programs	3,50%	6300000,00000000
Reserve	21,06%	37900000,00000000

The chart below is showing the shares distribution.

TheFund.io issues tokens (TFIO) that our investors will be able to sell on decentralized exchanges. This provides token (TFIO) holders with a free exit from investments and allows them to exchange their tokens for the most popular cryptocurrencies.

The token (TFIO) function:

Bounty Program

Token distribution:

As a reward for the bounty program, 3.5% (6.300.000,00000000) of tokens sold to investors are allocated as a reward for the bounty campaign, but not less than 425.600.

Road Map

- 2 stage (01.07.2017 - 31.12.2017)**
 - Development of technical and economic solutions to existing investment fund problems
 - Business model formation and planning
 - Partnership agreement established with a venture capital fund, GleimCapital
 - Executive team formed
 - Expert team formed
- 4 stage (01.07.2018 - 31.12.2018)**
 - TheFund.io marketing campaign begins
 - Personal office for investors releases
 - Pre-sale
 - Technical development for the Axon artificial intelligence begins
 - Technical development of the fund structure and the investor's personal account begins
 - MVP is in development
- 6 stage (01.07.2019 - 31.12.2019)**
 - Alpha-testing for TheFund.io platform closes
 - Alpha-testing of the Axon artificial intelligence closes
 - Access to decentralized exchanges opens
 - Investment portfolio is formed
 - Multi-signature wallet releases
 - Public beta-version of the TheFund.io platform opens
- 8 stage (01.07.2020 - 31.12.2020)**
 - Completed
 - Investments made in 30+ projects
 - TheFund.io is a fund for funds. Financial analytics, security, voting and dividend distribution products optimize the performance of investment funds worldwide

1 stage (01.01.2017 - 30.06.2017)

- Research and analysis of the current market situation
- Fund structure development

3 stage (01.01.2018 - 30.06.2018)

- White Paper developed
- Technical Paper developed
- ICO financial model established
- Juridical legalization of the project conducted

5 stage (01.01.2019 - 30.06.2019)

- Begins technical development of the blockchain smart contracts
- Multi-signature wallet is created
- Begins search for investment projects
- Investing in the most promising, selected projects starts
- First investments from the infrastructure part of the fund begin

7 stage (01.01.2020 - 30.06.2020)

- Public beta-version of Axon artificial intelligence opens
- Investors' personal accounts launch, smart contract for dividend payments releases
- Investments made in 20+ projects
- Investment areas expanded
- IOS app releases
- Android app releases

TheFund.io Strategy

TheFund.io Investment Strategy

TheFund.io investment strategy focuses on intensive and harmonious development.

The more opportunities (free capital) the fund has, the more favorable conditions it can provide for project participation, which is essential to the loyalty and trust of investors and the whole community. The fund must collect the maximum amount of capital possible before the promotion starts.

Our fund's business model is quite mobile and flexible, and we will plan future fund activities based on ICO fees.

Three business models make up TheFund.io strategy:

The Fund's work strategies include 3 business models:

1. Direct investment. Acquisition of the company's tokens share (more than 20%). Participation in the Board of Directors. Cooperation in management to increase profitability and growth of the company.

2. Portfolio investment. Acquisition of the company's tokens share (up to 20%). Passive participation in management.

3. Strategic investment. Acquisition of large shares of the company's tokens (up to 100%). Elaboration of business strategy. Participation in management. Counting on the long-term company's work.

4. Participation in projects at the stage of business formation and strategy formation, with the development of a business model, creation of an MVP project for ICO entering or with the release of a finished product to the market. Participation terms for investment projects will be negotiated individually and vary according to the fund's goals, the long-term strategy and the current economic situation.

Equity participation is planned at the level of investment in cryptoassets only.

For equity participation companies will need to sell their tokens to us (token type – security token). These tokens imply getting a part of the company's profit in proportion to the share of purchased tokens. Acquisition of the company's shares is planned in the future.

The Fund also provides management of existing cryptoassets through trading and/or exchanging the existing cryptoassets on markets and exchanges in order to minimize the risks of volatility and possible reduction in the value of assets.

The ideal conditions for the fund's existence depend on the amount of our estimated fees (specified HARD CAP level of \$25 million). When the fund reaches this level, it will maximize profits for short periods. Our team will be able to quickly manage and choose the most favorable conditions, with no time lost on income generation, and will have the opportunity to conduct venture investments. If our project does not reach the HARD CAP level, investment numbers and amounts will be reduced. This will not seriously limit our work but the fund's operations will be less intensive and, as a result, projects will likely lose profit when they reach insufficient liquidity. Thus, our priority task is to maximize fundraising.

A full-fledged investment portfolio with the distribution and selection of optimal investment shares will be formed during the Fund's work in accordance with the interests of profits maximizing and taking into account the risks of funds loss. Effective management and a clearer vision of the future development path will be achieved after the formation of the analysts' team of the Fund.

Investors of the Fund will be able to monitor the entire process of obtaining and distributing profit, as all actions will be carried out on the blockchain technology: publicly and automatically, using a smart contract. Dividend payments are made at the time of getting profit (tokens or coin) from the objects of investment, or income received from the companies' activities.

The Fund determines the purpose of its activities as making profit in favor of the Fund and its investors.

Fund Operation Principles.

Portfolio diversification.

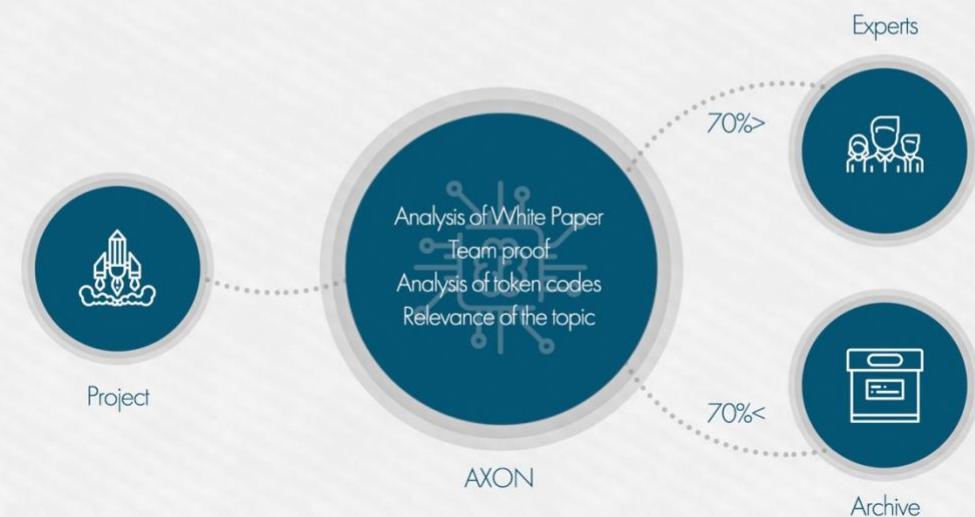

A smart policy in this area will allow TheFund.io to reduce risks from government institutions, high volatility of the cryptocurrency market, the economy, industry and more. Diversifying the portfolio by instruments, sectors, project types and country will allow us to take control of these risks without losing a significant profit.

Investments in the real business sector.

One part of the TheFund.io's investment diversification policy will involve investing in the real business sector. Projects that have passed all selection and evaluation stages can count on investments in stocks/bonds/options or direct financing from TheFund.io, which acts as a legal entity acting on behalf of its investors.

Thefund.io structure:

Prospective investment projects will pass two selection stages:

Project selection with the Axon artificial intelligence system.

Axon will score projects by collecting and analyzing information from a questionnaire and all available internet sources.

According to the results of this analysis, projects are divided into several groups:

- Those that can be immediately excluded, for example, in cases of plagiarism or scams.
- Projects that are worth investors' attention. We keep this category so as not miss interesting ideas that did not pass the Axon selection stage due to formal disadvantages in implementation.
- Promising projects that pass to the next stage of selection.

Project Selection with Experts.

At the second stage, projects pass the underwriting procedure. A randomly selected expert from a general commission checks and completes the data collected by the Axon system, then evaluates formal and informal indicators of investment appeal. Additionally, the expert will contact the team directly via Skype calls and private meetings as necessary. If the idea and the company pass all stages of the selection, the expert will assess returns and risks, then prepare and advocate the project to the commission. If successful, the project will move on to voting and investors can find all the information and calculations in their personal accounts.

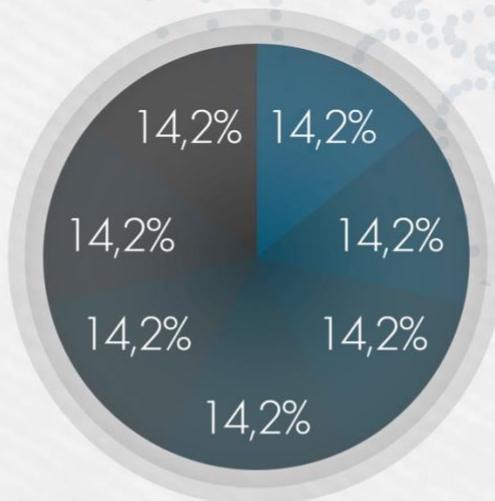

Prospect

Legal Opinion

Marketing

Team

White Paper

Token Economy

MVP

Voting.

Decisions regarding project financing from the investment part of the fund will be made according to the results of a closed, decentralized vote on the blockchain. Before voting, each investor must pass KYC and confirm token availability in his or her personal account wallet. Then, the investor will receive a unique cryptographic key. Each participant's vote is weighted according to the percentage of his or her investment in the total capital.

A vote cannot be valued at more than 20%, in order to preserve fair voting principles and prevent influence on the stakeholder's decisions. Voting participants receive dividends according to the total amount of their investments. Results are withheld until voting ends to maintain objectivity. After the vote ends, all results and statistics become available.

Security

TheFund.io will implement multi-signature protection for fund resources. This system will guarantee the fund's security, as all money transactions require a certain percentage of the total number of signatures. For example, if a project successfully passes the voting stage and has been accepted, one of the signatures will be automatically counted from the Smart Contract user. The signature from the project's underwriter to transfer funds and another signature from the head of the fund are required. Money will be credited to the project account once all of these signatures have been collected.

Project Support

TheFund.io offers consultations and real-time assistance to help invested companies reduce delays in profit generation, according to the stage of the project's development. Partnerships with experts from various areas of business will allow TheFund.io to provide the project with legal, economic, technical, media and marketing support, as well as create operational groups to control and improve the company's management.

Dividend Distribution

Each project TheFund.io invests in has projected repayment terms for the investment. If the project returns a profit, the investor automatically receives dividends on all available tokens, as dictated in the smart contract. The user will have access to all the information in his account, including the funding status, project type, dividend amount and other detailed information.

How does the Axon system work?

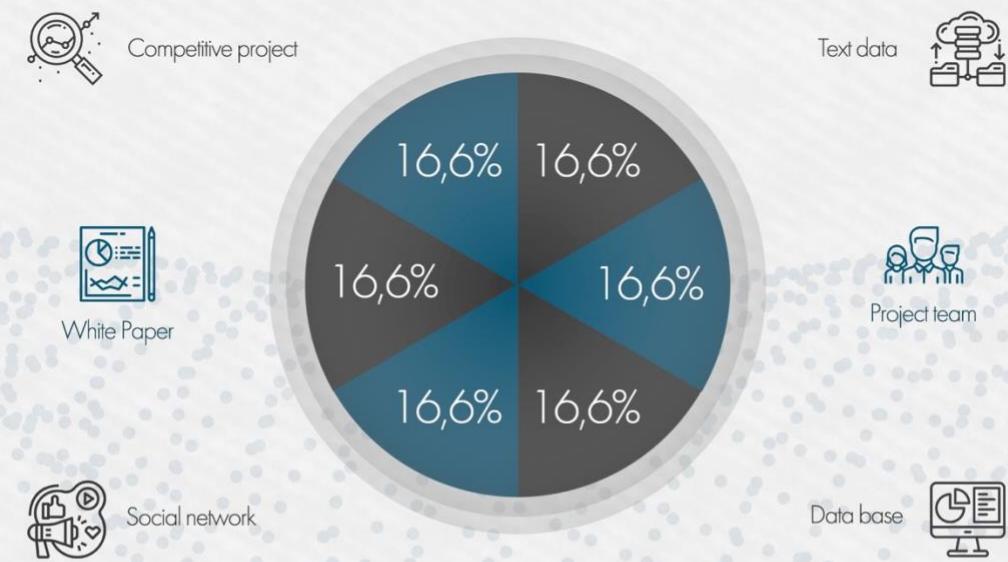

The Axon system is a set of statistical machine learning algorithms that can intelligently evaluate projects using specified parameters. Based on correlations in the analyzed data, the Axon system can identify patterns that people cannot see. It analyzes a company's activities, collecting data on the project's team members, their experience and the context of instances where their names are mentioned. The Axon system can also analyze project evaluations in rankings and trackers, project execution time, document plagiarism and other parameters.

The Axon module includes a network of bots that daily collects and processes information from a variety of sources related to cryptocurrency, blockchain projects and IT technologies.

Statistics are collected from each resource, like the activity and nature of the discussion, the number of articles written by the author, etc. The selected information is sent to the database for further processing. To sort and store data, we use an architecture in which all parameters are unified, that allows us to easily add new data in case changes in market needs have triggered the emergence of new strategies, not taking into account the existing characteristics before. Basing on the collected data our analysts will receive a detailed overview of the field which is able to form and process only a computer.

The collected information includes articles, criticism on forums and comments for several years. We traced the development of the blockchain technology and the cryptocurrency world in general and created an informative map of the crypto community. Such a tool allows us to distinguish periods of active development of the blockchain, and compare it with external factors that served as catalysts for such dynamics.

We are able to track and evaluate the activity of specific members of the crypto community that conducted an active discussion of innovations on the forums. The ability to analyze a huge amount of information structuring and presentation in a convenient form gives our analysts an incredibly powerful tool that allows you to see the development of the market on a large scale and to prevent the risk associated with investing to a minimum. The uniqueness of the process of collected data is related to their structure and consistency. This method provides an opportunity to collect statistics, search for information and build new investment strategies. In addition, it is easy to apply deep learning algorithms to such a structure to approximate market behavior and diversify investment risks.

Additional information

Page 29

Risks

By taking part in our project, investors and holders of TheFund.io tokens agree to participate in investment activities. Investment activity carries associated risks.

Investment risk is the acknowledged probability of partial or complete loss of invested funds.

It is understood that fund participants may be investors from any country. With this knowledge in mind, the responsibility for compliance with the legislation of our investors' country of residence lies with the investors themselves.

Each member of our fund is entitled to request compliance with the fund's conditions, supplied in advance, namely:

1. The number of TheFund.io tokens is commensurate with the investment amount (note that each stage of investment offers different conditions and privileges).
2. The opportunity to receive income from the investment activities of the infrastructure part of the fund is available to those who invested during the Pre-Sale and ICO stages.
3. All token holders can receive dividends from the activities of the fund's investment part.
4. All token holders can obtain technical support.
5. Only those who invested during the Pre-Sale and

ICO stages have the ability to obtain all information about the current activities of all parts of the fund (effectiveness of the fund's activities, accrued dividends, invested funds, current expenses, promising projects, and other analytical information).

6. All token holders can obtain all information about the current activities of the fund's investment part (the effectiveness of the Fund, accrued dividends, invested funds, current expenses, prospective projects, and other analytical information).
7. Investors may obtain all information about investment projects that have passed multi-level verification and view the opinions of analysts and experts
8. Investors may refuse to participate in the fund's investment activities by transferring and/or selling their tokens on the market.
9. Investors may express their will for/against by voting for a project financed by the investment part of the fund.
10. Investors can view a full report on the voting results, including a full analysis of all votes (without indicating who cast the vote).

The predominant risk when participating in our project is the partial or complete loss of funds.

However, our team will make every effort to ensure that the investment activity for all parts of the fund produces returns for our investors.

Legal

TheFund.io does not accept any users from the countries or territories where its activity shall be especially licenced, accredited or regulated by other ways. You shall check your applicable law and be fully responsible for any negative impact arisen from your residence country regulations. TheFund.io is not a tax agent andtherefore shall not provide users' financialinformation to any third parties. This information shall not be disclosed unless officially requested by government authorities. If you do not agree you must not access or use the website or purchase TFIO tokens via www.thefund.io website. Legaldisclaimer TheFund.io the tokens you purchased under certain conditions may be considered securities under u.s. law, and they were not sold in compliance with u.s. law in addition to the fact that u.s. citizens and residents are restricted to participate in tfio tokens sale under the conditions of token sale agreement of the TFIO tokens sale. If you purchased TFIO tokens being in the u.s. or if you are u.s. citizen or resident and you do not wish to continue to hold your TFIO tokens, you have the right for the next 30 days to tender your tokens to TheFund.io via info@thefund.io, at which point you will have the right to your money back after documentary proof of purchase of TFIO

tokens from TheFund.io during the TFIO token sale event and KYC procedure. You will not receive any interest or gains on your token. if you prefer to remain a holder, please note that you willbe deemed to have waived any further right to demand return of your money or assets provided for acquisition of TFIO tokens. We are aware that the TFIO token can be traded on a number of decentralized exchanges without our approval after the token sale. We neither endorse, nor are we involved in this trade. Speculative token trading contradicts the concept of the TFIO token and the TheFund.io project. We deny our involvement in speculative trading of TFIO tokens on decentralized exchanges and ask TFIO token holders to act accordingly.

Conclusion

On behalf of the whole TheFund.io team, we want to thank you for reading our project's white paper. Today's advanced technologies exist thanks to the experience of previous generations and the success of their most daring ideas. The quick pace of development is shaped by revolutionary products and technologies, which are not only superior to their counterparts, but also open up new roads for opportunity.

TheFund.io is an investment fund that creates new opportunities for investors and projects.

The aim of our project is to maximize the investors' profits by providing new opportunities in the investment field. Thanks to advanced technologies and our many years of experience, we can present a highly profitable, safe tool that can transform a promising idea into a commercially efficient business.

Our goal in the near future is to expand our audience of investors through effective fund operation and reach a leading position in the market.

In the coming years, we plan to:

- increase the fund's annual profitability;
- improve the efficiency of our technologies;
- expand the range of tasks that the artificial intelligence Axon can perform;

- provide access to the results of Axon's operations as a commercial product;

- provide effective support for project development. We see the future of investment as an industry-centric environment, not a scam. We want to make the investment process as convenient as possible, without minimum investment amounts to obtain tokenized profits. Most importantly, we want to adapt successfully it to everyday life for all our investors.

The Fund is a crystallization of our view of the investment world, as well as a solution to the above-stated problems. The Fund is based on our knowledge, our vision of the future, our desire to change the world for the better. Our analysts are young and very different specialists working as a solid team: diversity in experience and background help us create an extraordinary approach to each situation and account for any risks. An artificial intelligence will assist and accelerate the work of our analysts. AI is capable of collecting and processing a huge amount of data. It can identify patterns and draw logical conclusions based on information gained over hundreds of years. Machine learning can give the world of investment opportunities we could only dream of. Thus, we invest tradition in technology: we invest in our shared, better future.

My decision is to be on the side of progress. What do you choose?
